Additional information: This should talk about various coffee makers that this manufacturer offers. What are their most popular coffee makers, what's the main difference between them etc. If there is anything that sets this manufacturer apart from the other manufacturers of coffee makers then mention it too.

Title: The DeLonghi coffee makers collection offers something for everyone

Summary: No matter what your coffee desires, chances are there's a DeLonghi coffee maker for you.

Article: No matter what your coffee desires, chances are DeLonghi will have a coffee maker for you. Whether your preferences are for drip, percolated, thermo, or units with combination options, you'll get a deliciously brewed cup every time with these machines.

DeLonghi's variety of products range in price from the high-end automatic machines DeLonghi DCM900D 10-Cup Coffee Maker, to the simpler DeLonghi DC50 4-Cup Coffee Maker, with prices between \$40.00 and \$200.00. They also provide a variety of combination machines that offer every range of flavor, preference and type of coffee imaginable.

For the discriminating and trend-conscious coffee drinker, the 10-cup DCM900 is for you! Its unique design will be the kitchen talking piece for some time. The design is made up of two hourglass shaped carafes sitting next to one another, the combination of which brews up to 10 cups of coffee in less than eight minutes! Adding to the flavor potential is the stainless steel boiler that is housed separate from the hot plate, ensuring a stable heating temperature.

If a non-nonsense simple product is what you need, then the DeLonghi Electric Moka Espresso Maker is all you need. This easy to use espresso maker offers a small, compact unit that sits nicely in a corner or on a shelf until needed. The detachable base is easy to clean after use and has a built in safety system so the unit shuts off as soon as the body is lifted off. It has a very sleek look with a transparent container with a keep warm function built right in. To make your perfect cup of espresso simply fill the boiler with water, put coffee grounds in the filter and turn it on! In minutes you'll be sitting by the fire enjoying your hot brewed delight.

These options provide perfect flavor for one or a few coffee lovers, however if you require something for a crowd instead the 20-50 cup DCU500T Coffee Urn is what you'll need. This stainless steel option is full of functionality, including a double function spout and drip tray, a coffee level indicator so you know when the next brew is needed, and "on" and "ready" lights for convenience.

My favorite of the DeLonghi options, however, is the Coffee and Espresso Maker all-in-one. You can brew coffee and espresso simultaneously! The automatic system offers a programmable digital timer, with an automatic shut off for those days when you barely remembered to grab your keys on the way out the door. The jet frothier is built on a swivel base for easy adjustments and the selector dial means simple, easy strength control for each and every cup!

The DeLonghi line, all-in-all, provides options for any coffee enthusiast, with quality workmanship and a sleek contemporary design. You can't go wrong, no matter your preference or coffee desires, with this line of products.

But the most popular coffee maker from DeLonghi, according to online users, is the DeLonghi DC36TB 12-Cup Digital Coffee Maker. This marvelous machine offers an attractive 12-cup programmable unit so you can wake up fresh roasted coffee bean taste first thing in the morning! This dependable unit also costs less than \$50.00! Other features include:

- Eco-friendly permanent filter; no more messy throw-away paper filters
- Sleek black and silver design
- Automatic brew settings, so you don't have to worry about how you got that last cup of great tasting coffee
- A non-stick hot plate making cleanup quick and easy
- A water level window that allows you to see how much you need to add

Title: DeLonghi coffee products offer variety and functionality

Summary: No matter what your coffee desires, chances are DeLonghi will have a coffee product for you.

Article: No matter what your coffee desires, chances are DeLonghi will have a coffee maker for you. Whether your preferences are for drip, percolated, cappuccino, espresso, or units with combination options, you'll get a deliciously brewed cup every time with these machines.

DeLonghi's variety of products range in price from the high-end automatic machines like the Lattissima to the popular manual espresso machines and good the old standard coffee machines. They also provide a variety of combination machines that offer every range of flavor, preference and type of coffee imaginable.

The company is well known for its patented instant froth dispenser that they claim makes a perfect cappuccino or latte macchiato every time! Reviews seem to agree; however they do it, the results rival any standard coffee house option on the market! They also boast that their unique system soaks all the coffee grounds optimally for a richer flavor.

The Lattissima Pump Espresso Maker with a high pressure 19 bar pump seems to be one of the more popular units they offer. This 90 bar pump machine provides a rich, creamy flavor unlike the results achieved from a lower-end steam model. For around \$700.00 this machine is a favorite in its price range.

The DeLonghi caffe line also offers a quality steam espresso maker that sells for around \$50.00. Generally steam machines do not provide the same quality cup that a pump machine would, but reviews of this item seem to indicate that, despite the low cost, it provides an excellent crema! Figuring out how to work the machine takes a bit of a learning curve according to reviews, but once you've mastered it, the results seem well worth the effort!

And for the discriminating black-cup coffee drinker, the 10-cup DCM900 is for you! Its unique design will be the kitchen talking piece for some time. The design is made up of two hourglass shaped carafes sitting next to one another, the combination of which brews up to 10 cups of coffee in less than eight minutes! Adding to the flavor potential is the stainless steel boiler that is housed separate from the hot plate, ensuring a stable heating temperature.

If a non-nonsense simple espresso is what you need, then the DeLonghi Electric Moka Espresso Maker is all you need. This easy to use espresso maker offers a small, compact unit that sits nicely in a corner or on a shelf until needed. The detachable base is easy to clean after use and has a built in safety system so the unit shuts off as soon as the body is lifted off. It has a very sleek look with a transparent container with a keep warm function built right in. To make your perfect cup of espresso simply fill the boiler with water, put coffee grounds in the filter and turn it on! In minutes you'll be sitting by the fire enjoying your hot brewed delight.

These options provide perfect flavor for one or a few coffee lovers, however if you require something for a crowd instead the 20-50 cup coffee urn is what you'll need. This stainless steel option is full of functionality, including a double function spout and drip tray, a coffee level indicator so you know when the next brew is needed, and "on" and "ready" lights for convenience.

My favorite of the DeLonghi options, however, is the Coffee and Espresso Maker all-in-one. You can brew coffee and espresso simultaneously! Keywords: krups cappuccino maker

Additional information: n/a

Title: Two Krups cappuccino maker options that are sure to please

Summary: Two Krups cappuccino makers that are sure to please, and provide even the most frugal of budgets an at-home option for everyday coffee indulgences.

Article:

As popular as specialty coffee houses have been the past several years it's no wonder that the home specialty coffee machine has also become popular, but not everyone can afford a \$1,000 machine in order to enjoy a rich cappuccino or latte in their own kitchen, me included!

Krups offers two cappuccino makers that are sure to please, and provide even the most frugal of budgets an at-home option for everyday coffee indulgences.

The Krups XP4050 Espresso Programmable Cappuccino / Latte Machine is a semi-automatic option that provides quality coffee easily and affordably. It's a pump machine and not a steam machine, which makes a richer, better tasting coffee. Steam machines tend to over boil and are not able to provide enough pressure for a great expressed coffee bean flavor.

Semi-automatic machines also give you full control over the strength and taste of your coffee; you control when the pump starts and stops so you know exactly how strong your shot will be. As an added bonus on this machine, the front panel houses a warming tray that pre-heats your cup while it brews your coffee! Half of the joy of a great cup of coffee is a soothingly warm-to-the-touch cup in your hands.

It couldn't be any easier to use either. Add coffee grounds (the pre-measured filters are designed for a single or double or, for convenience it uses E.S.E. pods of quality ground coffee), make sure there's water in the water reserve tank (you won't have to refill often, the tank holds 32 oz.!) choose a

programmed or customized choice for size and strength and within minutes you'll be sipping your freshly brewed creation.

For the perfect cup of cappuccino though the key, according to the coffee geeks at 2basnob.com, is the coffee bean. Plan to spend as much as you can afford on a good quality coffee bean and you'll get even better results.

Reviews on this machine were mixed; most users indicated that the machine provided superior quality results but the workmanship was not the top of the line. Previous Krups users said they weren't impressed with this model. In terms of cost for quality and features, however, this product delivers an impressive tasting coffee at a reasonable price. The price was about average for similar products; you can purchase one at department stores or online for around \$250.00, a reasonable price for a high-bar pump machine.

For everyday indulgences it heats quickly, it's easy to keep clean, and it makes a marvelous head of froth. The unit also has a sleek contemporary look that fits comfortably in a small area on your counter. The stainless steel and black finish fits into any décor.

Some of the other features of this machine:

- * offers a 15 bar pump - www.2basnob.com recommends a pump machine over steam version because it provides a higher pressure rate to fully extract all the essence from the bean quickly; they recommend a minimum of 8-10 bars while this impressive machine offers 15!
- * you can program your own strength and taste preferences; one touch and it starts brewing with your specifications , precisely the same every time
- * an auto-cappuccino system provides foolproof frothing of milk
- * the convenient filter holds pre-measured inserts of single, double or E.S.E. pod coffee grounds
- * water heats quickly and the stainless steel warming tray pre-heats the cup while your coffee is brewing!
- * there is a thermoblock heating element for optimal temperature and consistent pressure for perfect extraction
- * unit cleans up easily with a removable drip tray
- * 32 oz. removable water tank makes refills a breeze

If money isn't an issue but a high quality brew is, then the Krups XP 9000 Superautomatic Espresso Machine may be your answer. With an internet price of over \$2,000, this unit pays off in convenience, ease of use, and functionality!

Some of its features include a built in automatic coffee grinder that holds up to 28 ounces of whole beans and four fineness settings for the freshest taste. The grinder tamps, brews, and disposes of the

grounds for the ultimate in hands-off convenience. There's a central steam nozzle for perfect cappuccinos and lattes at the push of a button, and an oversized digital display for easy programming. The unit also has a hot water nozzle for tea and hot chocolate and a removable 88-ounce water tank.

The Krups machines offer a sleek and functional design that you'll love to use again and again, whether you choose a semi-automatic, or the superautomatic, offering the ultimate in convenience and functionality!

Keywords: krups filter

Additional information: Talk about Krups permanent gold filter.

Title: For better, richer coffee flavor, a permanent Krups filter is a necessary indulgence

Summary: A permanent Krups filter provides a more robust and flavorful brew, especially from your more aromatic and expensive coffee beans.

Article:

You may wonder why anyone would purchase a gold filter instead of using the old paper standby. Well in today's environmentally-conscious world, this question should not be as hard to answer as it once was. But there are more reason to choose a gold filter over other varieties.

A permanent gold filter from brands like Krups provides a more robust and flavorful brew, especially from your more aromatic and expensive coffee beans. Although the difference is difficult to nail down in words, others have indicated that the flavor is "more complex" or simply livelier, indicating a taste that is more unique and enjoyable than when you use paper filters. What are the other advantages?

First is the obvious: gold filters last longer and can be used over and over again. Unlike their paper counterpart, there is no waste after you've finished brewing and you'll never have to worry about running out of paper filters again! How long will they last? For around \$12.00 - \$15.00 you can purchase a gold filter from Krups that will last literally years. In fact you may never have to purchase filters again. How's that for frugal spending!

Not all gold filters are the same however. Some filters are gold toned, meaning they are actually made out of stainless steel but are enhanced with a gold plating. For more money you can also purchase 23-karat gold filters, which could last even longer (but let's face it, just how many decades does one need?).

The next obvious advantage: no more paper filter waste! For the fully eco-friendly, store the coffee grounds in an old ice cream container and save them for your spring garden, or to use in plant compost.

But the biggest advantage to gold filters is the enhanced flavor you get over using paper filters. The fineness of paper filters is actually designed to eliminate some of the oils from ground, roasted coffee beans, but the filters also tend to eliminate too many of the oils. So some of the bitterness is eliminated, but along with it the flavor is also compromised.

Gold filters allow all the essential oils to drip through the filter, offering a far richer and fuller flavor. Unlike other metals, the gold also eliminates any metallic taste that might come through with typical metal filters.

You may wonder how a gold filter can keep all the grounds from seeping through and into your coffee. Just like paper filters the gold filters offer a tight mesh construction that works to keep grounds from seeping through just like paper filters. So you can retain the entire enhanced flavor of the bean without ruining your brew with unwanted grounds in the bottom of your cup.

Finally, using a permanent gold filter makes cleanup easier. A paper filter can be flimsy and difficult to remove easily once its been saturated, steamed, and run through with boiling water. A gold filter doesn't spill, or lose grounds from the coffee maker to the garbage can (or that compost container!).

Clean up is simple and easy; just remove the filter, eliminate the grounds, rinse under cool water and its ready for another batch of great tasting coffee in minutes!

A gold coffee filter may not be for everyone. In today's coffee world, however, a quality gold filter is less than the cost of two Starbuck specialty coffees, so the investment is well worth the initial cost.

Keywords: thermal coffee makers

Additional information: First talk a bit about what's good and bad (if you can't find any bad points then skip this) about this type of coffee maker. Then recommend a few different models (from different manufacturers) - write about a paragraph about each model.

Title: Don't be burnt by bitter coffee taste when a thermal coffee maker keeps your coffee piping hot for hours

Summary: Thermo coffee makers are perfect for daily use in your office, home or anywhere you regularly like to enjoy sipping a cup of hot coffee without the tart, bitter taste of coffee that has sat on a warming plate all day.

Article:

The most obvious advantage of thermal coffee makers is that they can keep your drink hot for hours and hours without compromising the flavor. This is perfect for daily use in your office, home or anywhere you regularly like to enjoy sipping a cup of hot coffee without the tart, bitter taste of coffee that has sat on a warming plate all day.

There are more advantages to thermo coffee makers, however. The rugged construction of most thermo makers means years and years of use, and the brushed stainless steel exteriors are quite stylish these days.

How do these marvelous things work to keep our coffee fresh and hot whenever we need it? Well thermo coffee makers are specially designed with double wall insulating systems. This insulation system ensures that heat does not evaporate and get lost like it does with glass in the typical coffee maker.

Some of the other features of a thermo coffee maker offer some convenience, especially for the busy business type with little time to mess with preparing coffee for the day. Some of these features include digital timers that offer pre-programming for up to 24 hours in advance. Program your requirements the night before and wake up to piping hot coffee ready for breakfast on the go and the office all in one.

The automatic shut-down of most machines also means you don't have to sit in your car on the trip to work wondering whether or not you turned the coffee pot off before you left. The specially designed carafes also help to keep you from spilling on yourself before you even get out the door, with a tight fitting lid for pouring. Some machines even offer color coded lids so you remember whether the brew was regular, decaf or flavored. If you need one of each variety, you can often purchase additional carafes, each of which will stay steaming hot until its needed.

So now that you're convinced of the efficiency and advantages of a thermo coffee maker, which one should you get? My favorite is the Cuisinart Thermal Coffee Maker DGB-600BC Automatic. This beautiful appliance grinds your favorite coffee beans right before it brews for the freshest flavor available. After its brewed, snap on the tight-fitting lid and you'll be the envy of the office every time you open it up for a refill.

It has a wonderful gourmet look of brushed stainless steel with an elegance that will fit into any office or home décor. The concept behind this wonderful creation is the preservation of all the marvelous flavor from each and every succulent bean. Freshly ground coffee beans provide a naturally complex flavor you can only achieve through the preservation of the essential bean oils, at their height just after they've been ground. Some of this machines additional features include:

- * 24-hour fully programmable
- * 10 cup capacity insulated thermal carafe

- * Brew Pause feature that allows you to enjoy your first cup before all the coffee has brewed
- * Grind-off feature if you have fully ground
- * 1 to 4-cup feature
- * Charcoal water filter to remove water impurities
- * gold tone permanent filter to preserve even more rich oil-enhanced flavor

Another popular thermo coffee maker is the Stainless Steel Thermal Carafe Coffee Maker Hammacher Schlemmer. This marvelous machine boasts that 90% of its peak temperature is maintained even four hours after brewing. For the best results its recommended you pre-wash the carafe in warm water before brewing, however this means you cannot use the programmable feature.

No matter which thermo maker you choose, the advantages are clear. Instead of letting your favorite brewed coffee languish on a hot plate, losing its taste and flavor every minute, a thermo carafe can keep your coffee flavorful and hot for hours on end. Definitely a clear choice for the all-day coffee drinker!

Title: DeLonghi espresso machines make everyone happy

Summary: Offering variety for beginners and experts alike the DeLonghi espresso machine line has something for everyone

Article:

From the compact to the super automatic, DeLonghi has an espresso machine that will fit your needs perfectly! As a brand DeLonghi coffee makers are known for their stylish look and convenient functionality. They perform well providing a consistently great cup of coffee each and every time.

As with any coffee machine, espresso varieties from DeLonghi range in price from \$60.00 (DeLonghi EMK6 Esclusivo Alicia Electric Moka Espresso Coffee Maker) to over \$2,000 (DeLonghi ESAM6600 Esclusivo Gran Dama Digital Super-Automatic Espresso Machine). Your choice will depend upon your

level of expertise, how much time and money you want to spend, and the quality of the results you anticipate from your purchase. To help you get started a few of the more popular DeLonghi espresso products are reviewed below, one for every price range including the beginner variety (\$100 and below), the intermediate semi-automatic versions (around \$250.00) and the ultra "gotta have it" super automatic at the highest price range (and a personal favorite).

At the beginner level one of the most popular options is the Electric Moka Espresso Maker. This compact unit is an ideal choice for those who want to enjoy the delicious flavor of a morning espresso without all the fuss and frills of larger models.

Its small size makes it perfect even for the office cubicle, or on a shelf in your kitchen in between uses. Don't let its small size fool you though. This small machine packs a whopper-size punch with delicious steaming hot coffee that will please even the most discriminating espresso lover. Although this is a step down from a more expensive pump machine, you will hardly be able to taste the difference. It even offers a keep warm function so you can start it and jump in the shower worry free and have a hot delicious cup ready for you when you sit down at the table before running off to work.

For the next step up, the popular EC155 Pump-Driven Espresso Maker has gotten marvelous reviews from users. For around \$130.00 this pump machine offers a unique filter system that mixes air into the brewing process for a marvelous crema! Use the swivel jet frother to make perfect cappuccino or latte. And brewing time is greatly reduced with the built in priming system, letting you enjoy a steamy cup in half the time of a comparable machine. In terms of bang for your buck, this machine is sure to be at the top of the list.

A popular mid-range option, providing the quality of a pump machine is the De'Longhi EC701 Espresso Maker. Prices average around \$250.00 for this unit, offering a full-bodied and rich tasting espresso with a self-priming operation that eliminates the annoying start-up time of most espresso makers. This model boasts a patented "sempre crema" filter, which enhances the brewing process for a creamier, richer tasting result.

You can make the perfect cappuccino or latte with the adjustable frother, with a system that combines steam and milk for a delicious froth. This system is designed to blend the artistic and scientific elements of good coffee brewing into one machine that is both convenient and provides a quality broth. Reviews tend to agree that it meets its mark!

Now for the ultimate in convenience and quality look no further than the super automatic Esclusivo Gran Dama! This precision machine blends feature rich quality, functionality and quality into a top-of-the-line appliance that is as easy to use as the touch of a button!

No longer worry about measuring, tamping, grinding, frothing, with one touch this system will do it all for you, including the clean up! This is the perfect machine for a busy office setting where time for messing with the coffee machine is a luxury not to be wasted. And for those who desire more control over the brewing process, a simple touch of the switch puts you in manual mode so you can regulate the length of the brew yourself. This machine provides fantastic flavorful coffee cup after cup.

So no matter your budget or experience level, DiLonghi has an espresso product to fit your needs and lifestyle so you can enjoy flavorful, rich coffee, cappuccino and lattes any time!

Keywords: flavia coffee maker

Additional information: n/a

Title: You can't beat the single serve taste of a Flavia coffee machine

Summary: The word is out, and consistently the results seem to be in favor of the Flavia Coffee Maker systems. Ratings over all top 4 out of 5 in customer reviews, making this one of the highest rated office machines around!

Article:

The word is out, and consistently the results seem to be in favor of the Flavia Coffee Maker systems. Ratings over all top 4 out of 5 in customer reviews, making this one of the highest rated office machines around! Why all the fuss? For the Flavia company the answer is simple: "Each FLAVIA Filterpack brews directly from pack to cup. So each drink is pure, fresh and untainted from the previous brew—with no mess and no cleanup needed."

This small unit packs in a lot of functionality too. It offers an adjustable base that can even accommodate a variety of cup sizes including travel mugs, it has a large capacity water tank for hassle free filling and a water filter for more flavorful results. Flavia's various models are designed to accommodate the single user and the large office with its three models, the Flavia Fusion for home use, the Falvia SB100 for smaller offices and the Creation 400 for larger offices. Each unit provides the same great quality drinks with hassle-free and reliable results for office use. Installation is also easy with no plumbing needed.

You can get over 30 varieties of flavorful drink for this unit to accommodate the discriminating tastes of anyone in the office or your family members and using the system is even easier. Simply choose a flavor pack, insert it into the brew head door, tailor your drink strength with the onboard dial and select the button according to the drink you are brewing to begin. Within 30 seconds you will have a hot, fresh steamy drink! That's all there is to it! Mix and match flavor packs for even more delectable flavor sensations (Flavia offers recipe combinations on their website). What could be more indulgent!

FLAVIA drinks stations are fast becoming the most popular model for home and office use for creating cappuccinos, mochaccinos, choco floats, iced drinks and more. Whatever your party guest or office needs you can provide at the touch of a button, this machine provides the perfect cup for any occasion but don't take my word for it. Here is what others have indicated they like most about this unique approach to office coffee makers:

- It runs quietly; no noisy motor to listen to constantly in the background
- There is never a mess; the single serve packets are a cinch to throw in the garbage
- The variety is fabulous!
- Teas and beverages are very flavorful
- It's easy to easy; just pop in the refill and push the button and in minutes its ready
- Takes less than 20 seconds for an awesome hot beverage
- The machine makes great froth
- It's fun to use!

Of all the reviews there were not very many negatives for this office favorite, but below are a few of the disadvantages users found:

- The biggest disadvantage – you have to purchase refills from the Flavia store online, and they can get expensive
- Refills can only be purchased in larger quantities, so unless you have a very large staff, variety can suffer
- Some people indicated they felt the machine was noisy

Keywords: bunn home coffee makers

Additional information: This should talk about various coffee makers that this manufacturer offers. What are their most popular coffee makers, what's the main difference between them etc. If there is anything that sets this manufacturer apart from the other manufacturers of coffee makers then mention it too.

Title: Bunn home coffee makers provide consistently high quality, dependable coffee flavor

Summary: When you purchase a Bunn home coffee maker, no matter which one you choose you'll know you're buying a product that will consistently provide a quality cup of coffee every time.

Article:

When you purchase a Bunn coffee maker, no matter which one you choose you'll know you're buying a product that will consistently provide a quality cup of coffee every time. Bunn has been around for many years making it one of the longest-running companies out there. But you may wonder if a Bunn product has the functionality and convenience you expect in a home coffee maker. After reviewing just a few of the many quality home coffee makers available by Bunn we think you'll agree that Bunn offers both the functionality and quality you need in a home machine.

Let's look first at the Bunn GRXB Original 10-Cup Home Coffee Brewer. This system can provide up to 10 cups of delicious, flavorful coffee in only 3 minutes time! Its spray head design improves the extraction process for a more flavor-rich taste, and it has an internal thermostat to keep the water at the perfect temperature during brewing. It also provides a hot water option for times when you prefer a nice cup of tea.

But lets not stop there. How about the Bunn coffee maker BTX. This 10-cup system includes a coffee carafe for hot, fresh coffee anytime without the bitter taste of over warming. This model also features the internal thermostat and the patented spray head design for improved brewing flavor.

For a single serve option the Bunn coffee maker MCP, or the pod coffee maker, provides a commercial quality system for use in the home. This model brews 4 to 12 ounces of coffee or tea to the desired strength in three minutes time with hardly any mess or clean up! A drawer-style pod holder keeps your hands from getting wet or messy and makes simple coffee pleasures a breeze.

The Bunn BT10B is another home coffee option. Some of the features of this machine include:

- * Features stainless steel body with 10 cup brewing capacity
- * removable water tank that holds 50 ounces
- * Brews coffee, hot and in only 3 minutes!
- * Offers an affordable price for a small maker

This is one of the best, affordable coffee maker options on the market. You cannot get a more flavor-rich coffee than this. The only disadvantage to this model is there is no way to keep the coffee from cooling down too quickly. If you need something that retains its heat longer without the losing flavor, try the thermo carafe option mentioned previously.

A step above the GR10 is the Bunn-o-mater. It's features include:

- * stainless steel body holds up to 50 ounces
- * 900 watts of energy versus the 500 watts offered with the BT10B model

- * still a pipping hot cup in only 3 minute!
- * Offered in Black or White to fit your decor
- * offers the advanced spray head design for high quality coffee flavor

Although the advanced spray head design was developed to improve the quality of the coffee bean flavor, some complain that the coffee ends up weaker as a result. The "always on" feature that allows you to brew in 3 minutes can also be an energy waster. But despite the disadvantages this is a durable, feature-rich machine and is priced only a bit more than other models with similar features.

These are only a few of the quality coffee makers offered by Bunn. Some others you may want to review include the B10B, GR10W, NHBB, NHBW, VP17-1, A10, and the Pour-omatic and VP17-2 Slimline Brewer.

Keywords: hamilton beach coffee makers

Additional information: This should talk about various coffee makers that this manufacturer offers. What are their most popular coffee makers, what's the main difference between them etc. If there is anything that sets this manufacturer apart from the other manufacturers of coffee makers then mention it too.

Title: No matter the time of day, Hamilton Beach coffee makers provide a taste for every occasion

Summary: Whether you need a good brew to go, or something that offers flavor rich coffee from home, you can make cafe-quality beverages with any of these great Hamilton Beach coffee maker units, any time of the day.

Article:

Hamilton Beach offers a few coffee and espresso maker models that are sure to please. Whether you need a good brew to go, or something that offers flavor rich coffee from home, you can make cafe-quality beverages with any of these units any time of the day. The most popular items include the Stay or Go Coffee Maker, which includes a thermal carafe and two travel mugs. All models cater to on-the-go use, but this model is particularly designed for the busy executive.

The Stay and Go model offers a programmable clock so you can have fresh brewed coffee any time of the day or night; brew your favorite cup while you sleep and wake to the rich aroma of your favorite coffee beans the moment you wake!

This model is offers the flexibility of a glass-lined carafe and travel mugs so you can be on the go in a flash. To ensure the appropriate level of water the reservoir has a handy guide inside with ridges on the coffee maker base indicating exactly where to position the travel mugs to avoid a mess. The lid remains on during brewing so the heat stays in, allowing the brew to stay hot longer.

Another Hamilton Beach favorite is the Deluxe 12 cup coffeemaker BrewStation, also designed for fresh, long-lasting flavor. Good for home or commercial use it offers 1-4 cup brew options and a gentle warming heater instead of a hot plate to keep coffee hot without scorching the coffee flavor. Most users felt this model was easy to use, and the single cup portions made it perfect for small families or a small office and for those who would use it occasionally and didn't need an entire pot of coffee at one time. The disadvantage of this product, however, was its longevity. Although inexpensive the unit didn't seem to last as long as more expensive comparable models.

If you need a coffee maker that fits into your own unique kitchen coloring the Hamilton Beach Eclectrics model will be your pick. Offered in colors like pineapple, apple (green) , carmine red and stainless steel this model is pretty but don't let that fool you; it's also full of functionality. With a no-scorch heater built in this maker will adjust automatically to maintain the perfect coffee temperature. The fresh flavor is the result of not over heating like many comparable units. The durable carafe is also designed to help prevent spills when pouring, or even when you fill the water reservoir.

It even offers a programmable timer that shuts off automatically and provides you with fresh aromatic brew first thing in the morning. It shuts itself off after 2 hours for no-worry usage day in and day out.

with automatic shut-off lets you wake up to fresh coffee, and shuts off automatically after 2 hours for worry-free brewing. And the best part; you can even order matching appliances in the same color!.

The chrome Thermal Carafe Coffeemaker is another thermo coffee maker you will love for its convenience and functionality. The digital readout is front and center, allowing for easy programming. And the durable carafe is large enough to provide you with cup after cup of hot steaming coffee but not too big to take with you to the office.

All in all the Hamilton Beach coffee makers are an affordable option for great coffee that brews quickly, cleans up easily and looks wonderful in your kitchen!

anything that sets this manufacturer apart from the other manufacturers of coffee makers then mention it too.

Title: For the best tasting coffee brewed anywhere, try a KitchenAid coffee maker for superior results

Summary: KitchenAid coffee makers provide better tasting coffee than even more expensive comparable units and is well worth the extra money when purchasing a quality top-of-the-line model.

Article:

KitchenAids best selling coffee maker is its Black Programmable Coffee Maker. This 14-cup coffee maker seems to consistently receive 4.5 – 5 out of 5 stars on dozens of reviews throughout the internet. Features of this model include an electronic brewing system, a pause and pour feature, a brew timers and a permanent gold tone coffee filter that adds to the robust coffee flavor. This unit also has a stainless steel housing likely adding to its durability.

Users' least favorite – the Programmable Coffee Maker with Thermal Carafe. According to users although, as always, this unit provides exceptional coffee quality and taste the unit does not seem to keep coffee warm as long as other comparable units.

One of the most recent items from KitchenAid is the ProLine Coffee Maker series. These units are currently being pre-ordered at many online stores and if the photos are any indicating of the quality of the machine I can understand why. This sleek little black mean machine has a wonderful contemporary style with a blue backlit display area and stainless steel control panel.

Reviews on this product so far? "This is an attractive coffee maker that works well and makes hot, tasteful coffee." This seems to be the consensus from most of the reviews I've seen so far. Some tips from these buyers: be sure to make room for the extra tall and extra deep size of this coffee maker. The unit makes coffee quickly and quietly and seems to be far more durable than earlier KitchenAid units. The price is a bit more than some of its other coffee maker lines but as one user put it "you get what you pay for" and with any KitchenAid appliance I completely agree!

Some of the main features of this coffee wonder:

- 12 cup capacity
- die cast metal Construction for durability
- stainless steel heat pump & brew basket
- digital brew timer & clock with 24 hour programmability
- fill reservoir is in the front
- has an automatic shutoff
- audible alert tones in case you're not in the same room when coffee finishes brewing
- water filter, and, the best part,
- a 2 year *hassle free* replacement warranty (serious that comes straight from their website! They must have some confidence in this product as many of their previous models had only one a one year warranty

Now even though I have a kitchen full of KitchenAid appliances and I wouldn't give them up for the world, when it comes to coffee makers aside from the newest line above, the reviews are mixed. On one hand, every review seems to indicate that you cannot get a better tasting cup of coffee anywhere, even from machines far more expensive than any of the KitchenAid models. But on the other hand, complaints of defective buttons, difficulty filling water reservoirs and other minor annoyances likely keep this coffee maker brand from taking more of the market.

The selection from KitchenAid seems to be good, with most options around \$100 or just over. They offer standard no-frills coffee makers and more advanced espresso/cappuccino varieties as well. The highest rated unit seems to be the Nickel Pearl Coffee Maker. It provides a perfect combination of style and performance along with functionality. The durability of the stainless steel body might also indicate a unit that will hold up a bit longer than some of its less expensive counterparts.

With a stainless steel heat pump and commercial-style showerhead this \$200.00 unit seems designed to last. And the coffee is reported as "exceptionally smooth and flavorful", all with a brewing time of just a few minutes. Overall this is a clear favorite of coffee maker users.

All-in-all then, KitchenAid still provides the best tasting coffee from its coffee makers than even more expensive comparable units and is well worth the extra money when purchasing a quality top-of-the-line model.

Title: With so many office coffee maker options, it's no wonder that taste and variety wins out!

Summary: After reviewing dozens of office and home coffee makers, one clear consensus among users is that the single-use office coffee maker stations are the most popular, provide the most flexibility, and offer the best tasting coffee, cappuccinos, lattes and flavored drinks anywhere!

Article:

After reviewing dozens of office and home coffee makers, one clear consensus among users is that the single-use coffee stations are the most popular, provide the most flexibility, and offer the best tasting coffee, cappuccinos, lattes and flavored drinks anywhere!

These units provide hot, fresh coffee in individual units, often in single serve thermo travel mugs, or even straight to your coffee mug. Individual coffee and beverage packets provides a variety of beverage flavors that can meet the needs of any coffee or beverage drinker, friend or foe.

What makes these units so popular is the ease of use, convenience, and the distinct advantage of no messy cleanup. Plus, you can get a hot steamy cup of joe anytime on demand! No bitter coffee that has been sitting in the pot for hours and doesn't even taste like coffee anymore.

User reviews of these models indicate that users love the variety; most complain about office hoarders that take all the good varieties as soon as the stock is replenished, leaving the rest of the office to fend for themselves! Imagine what would happen if they ran out of refills!

The disadvantage of these units however is cost. The refills tend to be a lot more expensive than even cartridge refills for 10 or 12 cup units. Varieties must also be purchased in bulk so offering a very large variety can get expensive.

Another perfect office option for the conscientious coffee addict is the Starbucks Office Coffee Service. Their website indicates that this service plan is ideal for 20 or more employees, bringing your office the "highest quality coffee and service available". Your office gets brewing equipment and bags of pre-ground Starbucks coffee along with tea selections, Starbucks coffee mugs and "all the napkins you need to make this the total break room solution." The cost for all this service and convenience? Don't know, you have to call their 800 number to find out (hmmmm). But imagine it! Starbucks coffee every day right in your break room! WOW!

On the more conservative side several coffee companies offer double carafe coffee makers. Because the carafes are thermo insulated and keep their temperature with naturally instead of with a heating pad, the quality of office coffee is far superior to the proverbial "glass coffee pot on a plate" variety.

No matter whether you decide to opt for a company purchased coffee machine or a coffee service, here are a few things to keep in mind when shopping for a coffee maker for your office addicts:

- Consider how many coffee drinkers will use the machines or service weekly. Are they willing to pitch in for more quality options, or does quality not matter, just something hot and wet?
 - Be sure that the coffee makers will be able to keep the coffee at a consistently hot temperature for long hours. No one has time to make new coffee every 20 minutes, so something that will last throughout the morning and afternoon hours will be important
 - Find out what the coffee preferences are in your office. Maybe there are more who would pitch in if the machine provided cappuccino or latte options in addition to regularly brewed coffee
 - Convenience is a must in a busy work environment. A coffee machine that will require tedious cleaning and upkeep maybe become the behemoth on the counter that never gets used
 - How durable is the machine? If it's constantly breaking down or requires continual maintenance to keep it working, it may be more trouble than its worth. Again, find out how many office members are willing to pitch in and get the best service or coffee maker the office can afford for serious coffee drinking
-
